

ValueLinks Module 9

Quality and standards

Structure of ValueLinks 2.0

Using standards

Contents

- 1** Definitions, types and importance of standards systems
- 2** Example Rainforest Alliance, a Private Voluntary Standard System

What is Quality?

1

| Attributes | Example | Verification |
|-----------------------|---|--|
| Physical attributes | Size, color, absence of damage, smell | Measurable at end product stage, client can select before consumption |
| Experience attributes | Taste of food, durability, functional efficiency | Measurable at end product stage, client knows only after consumption |
| Credence attributes | Residues, product safety | Measurable at end product stage, client has to trust a laboratory |
| | Eco-friendliness, social production conditions, origin of product | Not measurable at end product stage; partly measurable during the production process (e.g. emissions, resource consumption); client has to trust an assurance system |

Types of standards

1

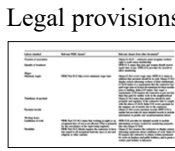

| | Product quality | Product safety | Social & ecolog. objectives |
|---|--|--|--|
| Regulatory Standards - issued by public bodies | <ul style="list-style-type: none"> - Technical norms - Product content and declaration | <ul style="list-style-type: none"> - Food safety laws - Maximum Residue Levels - Liability laws | <ul style="list-style-type: none"> - Minimum wage, working hours etc. - Environmental regulations, animal health |
| Voluntary standards - issued by companies, associations, private sector initiatives | <ul style="list-style-type: none"> - Organic - Halal - Product origin standards | <ul style="list-style-type: none"> - Global Food Safety Initiative (GFSI) standards | <ul style="list-style-type: none"> - Sustainability standards - Fair trade standards |

5

Types of standards

1

| | Product quality | Product safety | Social & ecolog. objectives |
|---|---|---|---|
| Regulatory standards - issued by public bodies |   |    | Legal provisions  |
| Voluntary standards - issued by companies, associations, private sector initiatives |    |   FSSC 22000, BRC, SQF, IFS, ISO 22000 |    |

6

Value chains and standards

1

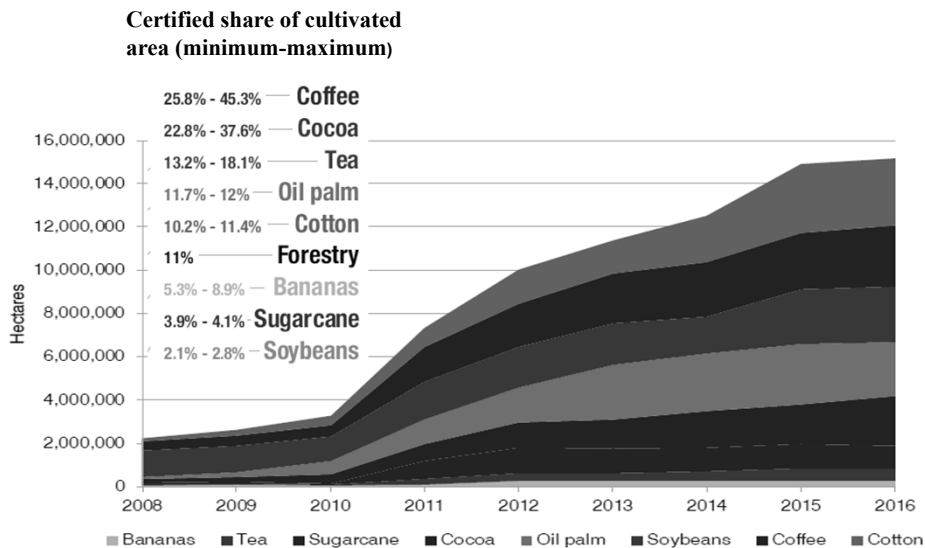

- **Regulation:** Standards operationalize the quality, safety and sustainability concerns of consumers, civil society and government.
- **Market transparency:** Standards simplify communication between market participants and assist marketing. Standards create a more level “playing field” and support fairness.
- **Quality management of enterprises:** Value chain operators use standards as an operational guide to integrate quality and sustainability considerations into their core business processes.
- **Risk management:** Standards help to lower the risk by introducing systems to detect critical points. Traceability mechanisms allow keeping control of suppliers.
- **Contribution to equity and sustainability:** Standards impose limits on resource use, use of inputs and labour conditions.

7

Development of sustainability standards

1

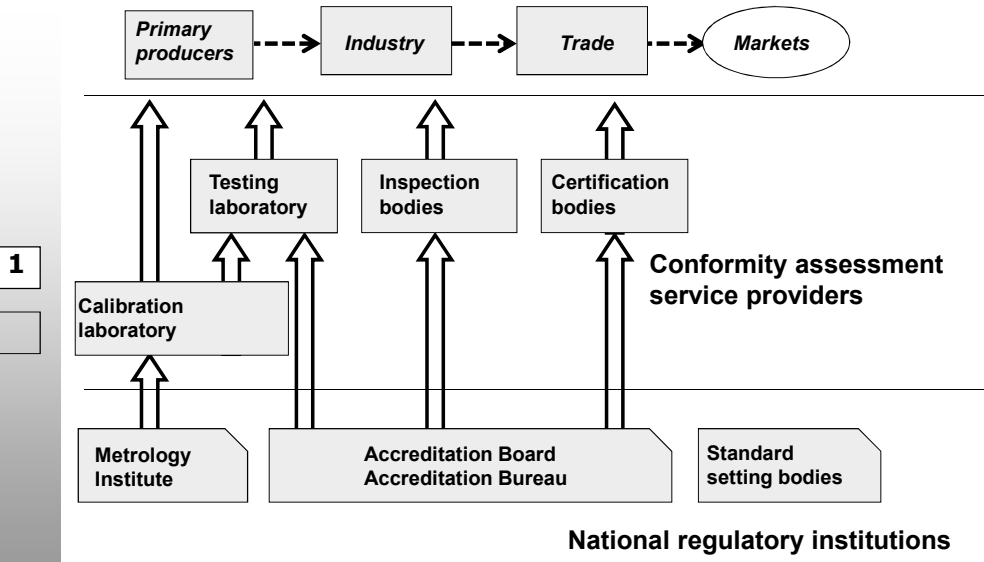

8

Source: International Trade Center, 2018: The State of Sustainability Markets

Minister Gerd Müller (BMZ), December 2018: 100% of all imports from developing countries should come with a sustainability certification in future.

Using standards

Contents

1

Definitions, types and importance of standards systems

2

Example Rainforest Alliance, a Private Voluntary Standard System

10

Rainforest alliance

- ...is an international, nonprofit sustainable development organization, which works to conserve biodiversity and ensure sustainable livelihoods by transforming land-use practices, business practices and consumer behavior.
- ...work with local and indigenous communities to produce more efficiently and at higher quality for international markets
- ...believes that the best way to keep forests standing is by ensuring that it is profitable for businesses and communities to do so.

2

11

The Sustainable Agriculture Network Standard SAN

- 10 Principles
- 100 criteria
- 14 CRITICAL criteria

Requirements for Certification:

- 100% of critical criteria have to be met
- 80% overall score
- 50% minimum score in EACH of the 10 principles

2

Rainforest Alliance

- Is one of 8 partner organisations in the SAN network which have worked together for more than two decades to develop, promote and support the implementation of SAN standards

12

The 10 principles of sustainable agriculture

- Social and Environmental Management
 - Eco-system Conservation
 - Wildlife Protection
 - Water Conservation
 - Fair Treatment and Good Working Conditions for Workers
 - Occupational Health and Safety
 - Community Relations
 - Integrated Crop Management
 - Soil Management and Conservation
 - Integrated Waste Management
- ENVIRONMENTAL PRINCIPLES

SOCIAL PRINCIPLES

ECONOMIC & MANAGEMENT PRINCIPLES

2

Example of non-compliance

- No proper wastewater treatment (Principle 4.5.)
- Not wearing proper protective gear (Principle 6.13.)
- Using the banned herbicide Paraquat (Principle 8.4.)
- Mixing certified with not certified products in the store (Principle 1.10.)

2

Certification examples
